1.GM farming in Latin America: Articles/Reports
http://www.gmfreeireland.org/news/index.php

In South America, GM soy production for EU livestock has caused the destruction of 21 million hectares of forest in Brazil, 14m in Argentina, and 2m in Paraguay. It has also caused violent land grabs, displaced indigenous peoples, dramaticaly increased the use of Monsanto's toxic Roundup weedkiller, caused major health problems, and created vast unsustainable GM monocultures - all to produce cheap animal feed for farmers in Ireland and other European countries. For more info see:
