

12<sup>th</sup> May 2016

*Sent by email only*

To: Ministers of Agriculture, Environment, Health and Food Safety of 28 EU Member States and Members of the Standing Committee on Plants, Animal, Food and Feed of the European Commission

**Subject: The renewal of the authorisation of glyphosate violates the European Regulation (EC) No. 1107/2009 on pesticides**

With regard to the imminent vote on the reauthorisation of the herbicide ingredient glyphosate, we, the undersigned 39 European organisations are writing to you to emphasize that the International Agency for Research on Cancer (IARC) of the World Health Organisation (WHO) categorized

glyphosate as a “**probably carcinogenic to humans**” in 2015. In humans, exposure to glyphosate caused an increased incidence of a malignant lymphoma (Non-Hodgkin-Lymphoma) and in animal studies, it caused increased incidences for different tumour types, including lymphoma.

Therefore, it is “probable” that the reauthorization of glyphosate in Europe will increase the rate of cancers, which are correlated to the use of glyphosate-containing pesticides and most likely to the consumption of glyphosate-contaminated food.

The assessment of glyphosate as carcinogenic by the IARC is based on a transparent and thorough evaluation of the best scientific literature available by 17 scientists enlisted by the IARC who have no conflicts of interest.

Glyphosate pollutes our environment, our food, and our bodies. A study published in March 2016 revealed that glyphosate was found in the urine of more than 99 percent of those 2.000 Germans who enrolled for this study.

Further, the use of glyphosate contributes to a massive loss of plant biodiversity, which has far reaching consequences for the food web, for pollinators and birds in particular.

**Therefore, we ask you to vote against the reauthorisation of the pesticide active ingredient glyphosate on the 18<sup>th</sup> and 19<sup>th</sup> of May, 2016.**

The IARC concluded that there is sufficient evidence in experimental animals, combined with limited evidence in humans for the carcinogenicity of glyphosate and strong evidence in genotoxicity studies. The human assessment is based on 14 epidemiological case-control studies concerning the “Non-Hodgkin-Lymphoma” (NHL) evaluated by the experts of IARC. A meta-analysis of these studies by the epidemiologist Prof. Eberhard Greiser, University Bremen, Germany, revealed that people exposed to glyphosate had a 45 percent higher risk of suffering from NHL, a malignant tumour of lymphatic tissues. NHL is fatal in more than half of the cases.

The EU regulations provide for an authorization of pesticides only when specific conditions are met.

The industry needs to ensure “that substances or products produced or placed on the market do not have any harmful effect on human or animal health or any unacceptable effects on the environment.” (Regulation (EC) No. 1107/2009, recital 8).

According to the applicable exclusion criteria, pesticide active ingredients shall not be approved if they show carcinogenic effects in animal studies or humans (Regulation (EC) No. 1107/2009, Article 4.1; Annex II, section 3.6.3).

“In particular, when granting authorisations of plant protection products, the objective of protecting human and animal health and the environment should take priority over the objective of improving plant production.” (Regulation (EC) No. 1107/2009, recital 24)

In an open letter 94 international scientists from 25 different countries raised their strong concerns against the hazard assessment by the German Federal Institute of Risk Assessment (BfR), acting as a Rapporteur Member State for the European Commission, and the European Food Safety Authority (EFSA), calling it “scientifically unacceptable”, “fundamentally flawed” and “misleading”.

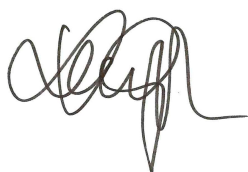

Detailed statements of experts annexed to this letter show that these authorities disregarded relevant OECD Guidelines in their cancer risk assessment and misinterpreted scientific studies revealing cancer incidences in humans or laboratory animals. These issues have been reported as a legal offence in three EU Member States and at the European Anti-fraud office (OLAF) by several NGOs and politicians.

In accordance with the Regulation (EC) No. 1107/2009, **a reauthorisation of the active ingredient glyphosate should be illegal in the European Union.**

The renewal of the authorisation of glyphosate will have harmful effects on human and animal health. Moreover, the victims from exposure to glyphosate and their relatives will seek responsibility for these foreseeable health damages.

For all of the above reasons, we urgently call on you to respect the precautionary principle and refuse the renewal of the authorization of glyphosate.

Yours sincerely,

Leonore Gewessler
